

Attaching the Legs

You will need 1 x shifter or socket

A towel or blanket, something to rest the barrel on to protect it

Legs x 4

Bolts and Nuts x 8

Adjustable Spanner

Cross Bar x 1
(optional)

Step 1

Lay the barrel on its side on a soft surface so you do not scratch it, and stand in front of the handle. Open the barrel up so you can easily reach the back of the barrel

Step 2

Position one leg at a time over the pre-drilled holes as shown. Use the bolt and nut to tighten each leg to the barrel. Use the shifter provided as well as another shifter or socket.

Caution Ensure the legs are fastened tightly before use

Step 3

Repeat step 2 for both legs on one side, then carefully flip over the barrel and repeat

Make sure that the top of the leg has the smaller piece of leg adjacent to the barrel. It should sit flush against the barrel.

Check each nut and bolt to ensure they are tight after the first use as the metal will get hot and may contract a little. This is normal.

Step 4

Attached the cross bar on the front legs as shown, tighten
